## **Jason Bane**

18 Morrison Ave. Newport News, VA 23601 (931) 239-0611 jbane@jlab.org July 18, 2019

Dear Hiring Manager,

Hello, My name is Jason Bane. I am a Ph.D. student at the University of Tennessee. I am in the process of writing my thesis and plan to defend late this fall. Working as a high school teacher , a graduate teaching assistant, and completing my research at Jefferson Lab has afforded me the opportunity to gain an immense amount of experience and skills working with, learning from, and instructing a diverse mixture of people.

My time at the lab has been devoted to honing my skills and knowledge in experimental physics. Working with the MARATHON, APEX, and Argon(e',p) experiments at Thomas Jefferson Lab has allowed me to work on constructing spectrometers, refurbishing detectors, and building electron systems for data acquisition. These experience and my drive to learn more will make me a prime candidate to be a physicist for the navy.

My work at Jefferson Lab has allowed me to work on many aspects of an experiment. I was able to work on the refurbishment and maintenance of an electron spectrometer for the MARATHON experiment. Preparing this spectrometer gave me the opportunity to gain experience in the design and construction of the front end electronics including designing and testing of a logic trigger. I continued my work with this spectrometer by contributing to the refurbishing of individual detectors in the spectrometer and erecting the data acquisition system. I assisted in the preparation of analysis software for the three different experiments. During the Argon, MARATHON, and APEX experiments, I helped maintain the online analysis software and replay scripts. Using the analysis software and replayed data, I calibrated parts of the detectors, focusing on the beam position monitors and analog to digital converter signals from the cherenkov and calorimeters. As part of my Ph.D., I have been analyzing MARATHON data. Part of my analysis task has been to compare data results to simulated data. In order to simulate data, I have had to work closely with cross-section models and simulation packages. Completing this analysis has granted me the ability to learn different coding languages like C++, fortran, ROOT, and python.

The knowledge I have gained working at Jefferson Lab would make me a great fit to be a physicist for the navy. My previous hands-on experience with the BigBite electron spectrometer would allow me to learn quickly to perform day to day operations on any radiation detecting devices. My experience with data analysis for three different experiments at Jefferson Lab has provided me with tools to analyze large sets of data. My familiarity with coding languages and simulation packages will help me to quickly understand and use new simulation tools.

Thank you for your time and attention, Jason Bane
